COLOURS AND FINISHES

Colours + Finishes

Most Weather It planters are available in all the finishes detailed – but please check the product page for a full listing as the design of some units makes certain finishes impractical.

For us, the real beauty of fiberglass is in the finishing. We have spent the last 35 years devising new and ever more ingenious ways to coat our products so that they have the look, the feel, the very essence of a dazzling array of natural stone, terracotta, concrete, earthenware and lovingly aged metals – but with none of their drawbacks and all the many advantages of fibreglass.

That's not to take anything away from our paint process, which can offer Gloss, Satin and Matt finishing to commercial paint shop standard using the highest grade, most weather resistant paint on the market today. We work in all RAL and BS colours as well as Pantone (PMS) and have matches for almost every other paint manufacturers colour ranges. Painted fibreglass is indistinguishable from powder coated steel and aluminium.

For extra long life, our Textured finishes are achieved by overcoating the surface of the product with a thick layer of self coloured liquid resin that bonds directly to it forming a weatherproof barrier that should remain unchanged for many years in even the harshest environments. While the colour choice is more restricted, this is an outstanding finish for commercial projects. In the following pages we showcase some of extraordinarily realistic 'natural' finishes we have developed. Swatches are available and are guaranteed to impress.

Gloss and Matt Finishes

With a full, professional body shop located at the heart of our workshop, we are able to offer almost any colour and finish of paint either on the market today, or even going back 50 plus years, from just about any UK manufacturer. We can match to almost anything given a physical sample and offer full gloss, satin and matt coatings as standard options. RAL, BS and Pantone colours are all available ready matched along with all your favourite specialist paint colours. We mix everything ourselves using our own computer controlled machinery to ensure you get the exact colour required. The paint itself is quite simply the highest quality, longest lasting and most weather resistant on the market, and like our products, 100% made in the UK.

When coated, flat fibreglass has the exact appearance of powder coated steel but again, none of the weight, cost, and in steels case, rusting issues that come with this material, which in our long experience is one of the problematic materials available if you want a long lasting, good looking, maintenance free, product.

Textured Finishes

Our classic textured finish is a smoothly rippled matt effect creating using a thick coating of self colour gel, to the same exacting specification as Lloyds approved marine grade materials used in boat building. This is our longest lasting, commercial grade finish, highly resistant to casual damage and filled with UV filters. It's corrosion resistance is legendary, designed to survive long years in close contact with sea water, so even a bit of acidic city rain holds no fears.

Colours + Finishes

This finish will remain unchanging in the harshest of environments for many years. While the colour range is less varied than wet paint, we can still match all the usual RAL & BS colours plus a good deal of the more common commercial paint colours. Send us an original and we will usually be able to achieve a very close match.

We also offer a textured paint finish in any of the wet paint colours listed above. While not the same robustness or patina as Classic textured, it is a useful option, particularly in high footfall areas where casual scratching and wear can soon deface a smooth painted product Like all our finishes, sample swatches are available on request.

Most Weather It Fibreglass planters are available in all the finishes detailed – but please check the product page for a full listing as the design of some units makes certain finishes impractical.

BS4800 and RAL Classic: Over 300 colours available in highly polished gloss, satin, matt or textured matt finishes so you can achieve a perfect match to other furnishings.

Standard Colours: Specially selected colours that are usually held in stock and will meet most requirements. Available in highly polished gloss, satin, matt and textured matt.

Polished Shimmer - Interstella: Vibrant colour with a hint of silver sparkle. Other colours on request – check availability before ordering.

Polished Metallics: The closest finishes to polished metal. Also available in satin sheen.

Polished Pearlescents: Deep, almost 3D colours.

Textured Metallics: Matt metal finishes with a rippled effect.

Dapple: Unique multicolour finishes adding further opportunities to personalise your planters. The finishes are coated with clear lacquer giving extra shine and a more resilient finish.

Natural: Unique finishes that exactly mimic natural materials. Please note all these finishes have not only the look but also behave like the real material, weathering naturally if outdoors. However, the surfaces will mark clothes if brushed against so use indoors only in low footfall areas. Rust can be matt lacquered to avoid this problem on request.

Colours + Finishes

Premium Finishes: Our premium finishes range includes our very own premium stone, Corten Steel/rust effect and Verdigris effect finish. Our selection of ***Stone Finishes*** are a new finish range developed by Weather It to give the most realistic stone finish available on the market. These finishes include a very high aggregate load and as such, also feel like real stone and are very hard wearing, resisting bumps and scratching.

The 8 standard colours give a flavour of the colour range range, but there are over 70 variations available to order to better match the particular stone used on individual projects.

Our ***Corten Steel*** effect finish is the result of many years of development that has produced a rust effect that where we are able to control the mount of rusting, the depth of colour and the patina. We can also fix that moment in time, stopping further rusting and preventing rusty run off onto finished surfaces. We guarantee that no one will be able to tell that your fibreglass planter or seat is not made from real Corten steel.

For roof gardens and terraces in particular this is a game changing finish. But we recommend it for anywhere Corten steel was to be used – Fibreglass is more cost effective, much lighter, just as strong and every bit as long lasting. While other faux rust finishes are available, we are the ONLY landscape product manufacturer using this trade marked finish. For the ultimate in ‘unreal steel’ its got to be Livingreen.

Like Corten Steel, our ***Verdigris finish*** uses real metal to create a thin copper plating on the surface of the fibreglass. This oxidises naturally in the elements creating a beautiful blue/green patina overtime. As the finish is the product of genuinely oxidised copper, it behaves in exactly the same way meaning the effect is fragile can be rubbed off accidentally. So we recommend this finish for an area of low footfall where the product is unlikely to be brushed against. Again like Corten Steel, Verdigris can be fixed by application of a specially developed lacquer which makes the surface much more robust without dramatically changing the effect.
